

The Nestlé Operations Management Training (OMT) Internship is a 12-week paid summer internship based in one of twenty-six Nestlé factories throughout the nation. Interns will have the opportunity for alignment within three functional career paths:

- Operations
- Engineering
- Quality

This program provides the opportunity for selected college students who have a strong desire to work in a manufacturing environment to gain real world experience and an understanding of the role of Technical & Production. Designed with the full support of executive leadership, this internship will allow interns to be involved in leading substantial projects from start to finish that deliver results on key business opportunities. At the conclusion of the internship, interns will have the opportunity to present their project findings and recommendations to leadership within the factory.

Past Project Examples:

- Operations: Evaluate data and determine primary cause of minor stoppages on product lines. Work with factory line teams to implement solutions and reduce stoppages by 25% by creating action items based off of root causes.
- Engineering: Effectuate a successful Kaizen event by organizing factory employees to identify 8 high priority utility losses in all major factory areas in order to drive goal of energy and water conservation.
- Quality: Identify and eliminate problems to reduce holds on product lines by developing and implementing an on-line sensory program, creating an on-line sensory form, working with team leads, and training all line associates.
